Code and projects

PROFILE

Trained in computing at secondary school, at UNamur and then at school 19 (42 network), I learn by building tools I use every day: a web platform in production, a home server, local AI, connected devices. I use AI coding assistants the way developers used Stack Overflow, keeping ownership of the architecture and the review. I am looking for a first IT job in Luxembourg or nearby: development, systems, support, AI or fablab.

PROJECTS

huburton/os, personal platform 06.2026 →
Web app in production (~14,000 lines of TypeScript): Google Calendar sync, projects and tasks as Markdown in an Obsidian vault, media library, tool-using AI agent, push notifications.
Astro · React · Bun · Hono · Docker

job-scout, job-search agent 09.2026 →
Collects 9 job sources four times a day, filters on editable criteria, has a local model extract and judge the offers (constrained JSON), computes the commute and notifies the best ones. 38 automated tests.
Python · SQLite · Docker · llama.cpp

Jarvis, local voice assistant 09.2026 →
French assistant with no cloud: wake word, Whisper transcription on CPU, local model, tools with three permission levels and spoken confirmation, Piper voice.
Python · faster-whisper · llama.cpp · systemd

Online ordering for a pizzeria, on Odoo 10.2026
Prototype for the pizzeria L'Italia (Latour), where I worked for 4 years: ordering inside the Odoo website, pickup times based on kitchen load, orders sent to the kitchen from the till. Tested end to end in a sandbox, not in production.
Odoo 19 · JavaScript · Docker

AI agent orchestration 10.2026
Always-on Claude Code session that hands long tasks to worker sessions (written brief, done criterion, result check) and reports through a single channel, desktop and phone.
Claude Code · MCP · Bun · TypeScript

Homelab and local AI 11.2025 →
Docker services behind Caddy, published through Cloudflare Tunnel with no open port, Tailscale remote access, Gitea, Home Assistant; local language models on two GPUs.
Docker · Caddy · Cloudflare · Tailscale · llama.cpp · Linux

Electronics and 3D printing since age 16
3D printer built from aluminium extrusions; connected pet feeder (ESP8266, Home Assistant); 18 functional parts designed in Fusion 360.
ESP8266 · ESPHome · Fusion 360

EXPERIENCE

Website and solar panel installation · Hélios Energies 2023 → 2026
Built and maintained the company website (paying client); earlier, 4 months installing solar panels as a student job.

Computer hardware sales and repair · Computech, Dampicourt 1 month
In-store advice, PC diagnosis and repair.

Student and seasonal jobs: pizzeria (4 years while studying, then pizza chef until August 2026), restaurant work, temp work in a paper mill, street sales. Scout leader for 2 years.

SKILLS

Languages
TypeScript · JavaScript · Python · C · PHP · Java · Bash · SQL

Web
Astro · React · Bun · Hono · Node · HTML/CSS · REST · SSE

Systems
Linux (Arch, systemd, Secure Boot) · Docker Compose · Caddy · Cloudflare Tunnel · Tailscale · NFS · Git

AI
Local LLMs (llama.cpp, CUDA) · agents and tools (MCP) · Claude Code · Whisper · Gemini API

Electronics and making
ESP8266 · ESPHome · Home Assistant · Fusion 360 · 3D printing

EDUCATION

School 19, 42 network (Brussels)
2024 → 2026
C and Unix common core, team projects.

UNamur, computer science
2021 → 2022
First year; very good results in computing.

Secondary diploma (CESS), computing track
→ 2021
8 h of computing a week; AI & Python internship at LuxScan.

LANGUAGES

French
native

English
fluent in writing, good spoken

INTERESTS

3D printing and CAD · electronics and home automation · self-hosting · local AI
